

User Story: Favorites

As I use the app, the option to add a place to my favorites appears after location recommendations have been filtered according to my specifications. If I've favorited a place or event in the past and return to that location, the app lets me know that there is something I liked nearby and recommends it immediately. Another useful feature is that if I use the app to decide on a place to go, I don't have to open it up again when I'm done just to add it to favorites. Instead, whenever I next open the app, it will ask me if I would like to add it to Favorites. At any time, I can access my Favorites list and add or delete places/events from it.
